

Unparalleled Asset Protection

Gentoo is a next-gen, multi-functional corrosion-resistant and easy-clean coating that's easy to apply and stands up to even the harshest of environments. With its combination of high-performing abrasion resistance and very low sliding angle, Gentoo excels where other coatings have fallen short. Gentoo is a transparent coating that not only repels water but many oils and solvents, as well.

Easy Cleaning

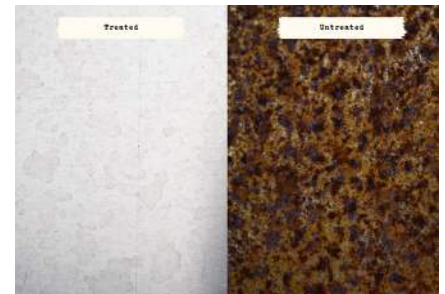

Gentoo is organic, clear, and durable. It's easy to apply and forms a hydrophobic and oleophobic barrier that's very easy to clean. Gentoo can be used on just about any piece of equipment—from bulldozers and trains to pumps and tanks—preventing water, oil, dirt, mud, grime, graffiti, and more from adhering to the surface in most cases. Gentoo can even be used on sensitive electronics.

*"Cleaning a single BOP [blow-out preventer] used to require an hour or more. With Gentoo-coated BOPs, we're down to about 15 minutes—and that translates directly into savings."
- Ismael "Shorty" Real - Shop Manager, Great Plains Oilfield Rental*

Corrosion Resistance

Gentoo is a sol-gel technology, which revolutionizes corrosion control and protection. During and shortly after its development, UltraTech International and its partners conducted in-depth testing to certify Gentoo's key attributes both in the lab and in the field, including with the United States Air Force (USAF).

Renew and Protect

Gentoo renews oxidized paint, while protecting it from abrasion and harsh environments. And since Gentoo can be sprayed on, it protects every nook and cranny—not just flat surfaces. This is useful for protecting complex equipment and machinery.
