

An Easy-Clean and Highly-Repellent Coating for Manufacturing Equipment

Award Winning Technology

Save Time and Maximize Productivity

When producing mass quantities of a product, keeping the equipment clean is extremely important. This can be a challenge in the rubber and elastomer manufacturing industry where product build up can be found on machinery such as liquid tanks and vessels, molds, formers, chutes and conveyors. Build-up creates possibilities for defects in products and extra time spent cleaning.

Gentoo can be applied to almost any surface to create a clear and easy-cleaning barrier that can stand up to even the harshest of environments - hot, cold, wet or dry. Using Gentoo to coat production equipment, not only helps repel unwanted contaminants, but also repels rubber compounds, making cleaning and maintenance easier, faster, and more efficient between production runs. When it is time to change over the equipment residue is easily removed due to the highly repellent nature of Gentoo.

What is Gentoo?

Gentoo is a next-gen, multi-functional corrosion-resistant and easy-clean coating that's easy to apply and simplifies maintenance and extends equipment life cycle. With its combination of high-performing abrasion resistance and very low sliding angle, Gentoo excels where other coatings have fallen short. Gentoo is a transparent coating that not only repels water but many oils and solvents, as well.

Additional Benefits

- + Hydrophobic
- + Durable
- + Transparent
- + UV Resistant
- + Abrasion Resistant
- + Oil/Solvent Resistant
- + Corrosion Resistant
- + Flexible
- + Easily applied with minimal surface preparation
